Simple, transparent pricing.

Two ways to buy $LEDGER — pick what suits you. No hidden costs, and you always see your exact amount before you pay.

TWO WAYS TO BUY

Pay by card

Instant · one click

We handle everything — your tokens are delivered straight to your wallet. A single **Processing & Fulfillment Fee** covers card processing and the on-chain delivery. Bulk pricing below.

Buy on Uniswap

No platform fee

Swap directly from your own wallet. You complete the trade yourself, so there's no fulfillment fee from us — just the standard network & exchange costs.

CARD PRICING — THE MORE YOU BUY, THE LOWER YOUR RATE

YOUR ORDER	FEE RATE	YOU'LL SEE THIS BEFORE PAYING
Up to $150	**9.9%**	exact tokens shown at checkout
$300	**~7.9%**	bulk rate kicks in
$500	**~7.1%**	lower the more you buy
$1,000+	**Buy on Uniswap**	cheapest for large orders

Your price is the **live market rate locked the moment you pay** — a later swing never changes how many tokens you receive — and your **exact amount is confirmed by email**. ($2.00 minimum fee.)

$LEDGER AND $PSI

Your early stake carries forward.

$LEDGER is your entry into the AuraVision token economy. When **$PSI** launches, your $LEDGER carries into it — holding $LEDGER today means you're already in, early. **Full conversion details will be shared at the $PSI reveal.**

HOW IT WORKS — 3 STEPS

1

Choose how much

Enter a dollar amount — any size works.

2

Pay by card

Just like any normal online checkout.

3

Tokens in your wallet

We send your $LEDGER on-chain for you. Done.

↓

QUESTIONS, ANSWERED SIMPLY

Do I need crypto experience?

No. If you can shop online, you can buy $LEDGER. We handle the blockchain part.

What is the fee for?

It covers the card payment and us delivering your tokens to your wallet for you.

Is my price locked in?

Yes — fixed the second you pay. Later price moves never change how many tokens you get.

What is $PSI?

The token's next chapter. Holding $LEDGER now means you're already in when it arrives.

Always verify before you buy. Official $LEDGER contract: 0xD1F2586790a5bD6DA1e443441df53aF6EC213D83. Card delivery goes on-chain to the wallet you provide and is final — double-check your address. Buy only through our official links; anyone DMing you a different contract or address is a scammer.

The same dollars – more tokens.

Every other way to buy stacks a fee at each hop: the card purchase, its hidden spread, the transfer, the swap, the slippage. Buy by card with us and it's **one fee, one step** – so more of your money lands as $LEDGER.

> "I compared my usual way – card buy on Crypto.com, transfer to MetaMask, swap on Uniswap – against the card option here. **It brought me almost 6% more tokens.** I did both at the same time to be sure."

> – Volker, Club Amber member · verified head-to-head, 16 Nov 2026

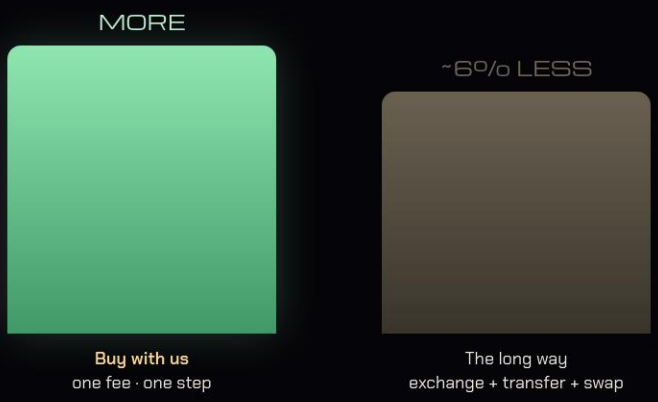

EVERY ROUTE, SIDE BY SIDE

HOW YOU'RE BUYING	WHAT GETS SKIMMED ON THE WAY	
Crypto.com card → MetaMask → Uniswap Volker's route	card fee + spread · transfer · 0.3% swap · slippage	→ ~6% fewer (measured)
Coinbase card → wallet → Uniswap	~3.9–4.5% card · transfer · swap · slippage	→ fewer tokens
MoonPay / Transak widget → Uniswap	~4.5–5.5% on-ramp · swap · slippage	→ fewer tokens
Buy by card here – delivered to your wallet	**one fee, one step**	**→ the most tokens for your money**
Already hold crypto? Uniswap direct	just 0.3% swap + gas	→ cheapest if you're already set up

≈ 6% more $LEDGER for the same money – **measured, not marketing**. On a $300 buy that's roughly **70,000+ extra $LEDGER** in your wallet (illustrative, at today's price).

Straight with you: if you **already hold crypto and a wallet**, swapping on Uniswap yourself is the cheapest path – we'll never pretend otherwise. But for buying with a card and skipping the exchange, the transfer, the swap and the slippage, **our one-step card path puts more tokens in your wallet** – exactly what Volker measured.

SAME $300 IN – WHAT YOU WALK AWAY WITH

Fewer stops = more coins in your wallet.
Simple as that.
